

Draw a measure trap

Well, you know what a trap is. There are trapdoors. There are heffalump traps. There are man-traps. There are traps for catching wild cats. Mice. Mink. Lobsters. So you can draw your idea of a trap and then you can measure it. Or you could put a measure into it. Like maybe a tape measure. Or a ruler. Something measuring.

Alternatively, if you are not JP, you could draw a treasure map. You begin with an island. Then you colour it in. (Hint: blue for the sea. So people know it's an island.) Then you add Physical Features. (Trees, waterfalls, heffalump traps, gullies, heaps of stones, picnic tables, whatever.) Then you can draw in roads or cycle paths or mountain-goat tracks. And then you put an x where the treasure is.

Then you hide it, so nobody can find the treasure.
(Use the back of the page if you need more space.)
